

Enterprise Information Management

Enterprise Information Management (EIM) is a specialised branch of knowledge within the vast discipline of information technology. The main objective of enterprise information management is to use organizations information and databases effectively, primarily to support various decision making processes and managing different business operations efficiently. This book aims to provide a broad overview of significant topics like implementation of information technology in emerging sectors, evaluation of different techniques and processes currently used in information technology management and knowledge management, etc. It will prove to be a valuable source of reference for all the students and researchers engaged in this field.

Enterprise Information Management is een methodiek die is gericht op het invullen van informatiebehoefte die ontstaan door de doelen die een organisatie Enterprise information management refers to the optimization, storage and processing of data created and used by a large business.
