

Natures Mind: The Biological Roots of Thinking, Emotions, Sexuality, Language and Intelligence (Penguin Science)

This is an analysis of the way in which science is reshaping the age-old question of nature versus nurture. Recent discoveries in biology, brain science and cognitive science have led to a new view of human behaviour; a view in which natural selection affects everything from clinical depression to the development of language. Gazzaniga, a neuroscientist, assesses the findings and looks at the implications of the radical new selection theory which links thinking, emotions, sexuality, language and intelligence.

Gazzaniga believes that circuits for language and problem-solving were built into the human brain as the result of millions of years of evolution. Selection theory

Natures Mind: The Biological Roots of Thinking, Emotions, Sexuality, Language, and Intelligence. Michael S. Library of Science alternate. (Oct.) DETAILS. In the social sciences since the 1900s and the humanities since the 1960s, Culture, not biology, shapes what we are language, not the world, determines what we think. human and other perceptual systems artificial intelligences discovery of the

Intelligent Systems. .. Natures Mind: The Biological Roots of Thinking, Emotions, Sexuality, Language, New York: Penguin. Philosophy of mind is a branch of philosophy that studies the nature of the mind. These approaches have been particularly influential in the sciences, cannot be reduced to the language and lower-level explanations of physical science. . Many modern philosophers of mind think that these intuitions are misleading and The co-discoverer of the split brain theory tells how science is recasting the age-old question of nature versus Natures Mind: Biological Roots Of Thinking, Emotions, Sexuality, Language .
